Thomas Motais De Narbonne

Edgewater, NJ | (201) 554-9081 | tsm6956@nyu.edu | thomasmotaisportfolio.net | LinkedIn | GitHub

EDUCATION

New York University, Tandon School of Engineering Sep 2024 - Dec 2027

- Bachelor of Science in Computer Science, Minors in Mathematics and Quantum Technology | GPA: 3.5/4.0
- Relevant Courses: Data Structures & Algorithms, Computer Architecture, Operating Systems, Applied Cryptography, Design & Analysis of Algorithms, Intro to Machine Learning

WORK EXPERIENCE

Equal Experts, Software Engineer Intern – London, UK Aug 2026

- Extended an email-only timesheet reminder system using Python, Google Cloud Functions, Java, and Vue, adding a Slack notification channel for client reminders.
- Resolved employee IDs to Slack accounts using Cypher and Neo4j, eliminating notification mismatches caused by duplicate or unmatched accounts.
- Built a TDD-driven admin tool using Python, Java, and Vue/TypeScript, enabling developers to trigger and verify test Slack notifications across the full stack.
- Developed unit and integration tests with structured error handling, validating recipient resolution, message delivery, and failure scenarios end-to-end.

GameOn Scheduler, Software Developer Intern – Remote Jan 2026 - May 2026

- Engineered AI-powered outbound calling agents with Vapi, migrating from Twilio to improve flexibility and reduce costs; automated product-demo scheduling across 5 facility verticals.
- Developed real-time conversation logic that adapted agent responses to client dialogue and triggered automated SMS confirmations and reminders.
- Built an automated Excel/CSV data-cleaning pipeline with configurable column selection and null-value handling, reducing manual contact-list preparation.

Giorgio Armani, IT Intern – New York, NY Jun 2025 - Jul 2025

- Provisioned users and devices across the Americas using Active Directory, Azure, and Microsoft 365, implementing role-based access and licensing.
- Deployed laptops, tablets, and networking equipment using imaging scripts and PDQ Deploy, supporting 9 retail store launches.

EXTRACURRICULAR & PROJECTS

Ancad — AI Networking Platform | Founder & Developer | *In Development* Jul 2026 - Present

- Engineering an AI-powered networking platform to help students discover professionals and create personalized outreach for internships and coffee chats.
- Building scraper and ingestion pipeline aggregating 9,000+ US internship listings, served through a standalone API and database at internships.ancad.org to keep the main app's storage and query performance lean.
- Published Chrome extension using the Chrome Extensions API to streamline professional-profile workflows and connect users with Ancad's contact-enrichment and outreach tools.
- Integrating Gmail API with AI-generated personalization to automate user-approved networking emails and streamline outreach workflows.

Automated AI Content Generation & Publishing System Apr 2025 - Present

- Engineered an end-to-end AI content pipeline using local LLM inference, text-to-speech, and automated media processing to generate, render, and publish short-form videos.
- Coordinated unattended workflows with self-hosted n8n, implementing scheduling, concurrency control, and conditional execution for reliable automated publishing.
- Scaled system to 700+ videos published across YouTube and Instagram with 100,000+ total views, running fully unattended with no manual editing or uploading.
- Integrated Qwen 2.5 14B with Python, MoviePy, Whisper, and FFmpeg, to optimize the video-processing pipeline and reduce runtime by 35%.

TECHNICAL SKILLS

Programming Languages: Python, C++, JavaScript, SQL (MySQL, PostgreSQL)
Frameworks/Cloud: React, Next.js, Flask, Azure, Google Cloud Functions, Supabase
Tools: Neo4j, Git/GitHub, Linux, PowerShell, n8n, Slack API, Chrome Extensions API, Jupyter, Anthropic API
Languages: Fluent in English, French and Japanese
